

THE SIGNIFICANCE OF THE RETROMOLAR AREA IN THE ACUPUNCTURE BLOCKADE SYNDROME

Acupuncture channels in the oral cavity

- The real situation is much more complex than this

Acupuncture channels on the area of the head

The system of the Liver channels on the area of the head

The system of the Gall channels on the area of the head

The upper lip points, the lower lip points and the retromolar area

The extent of the RM area

The acupuncture projections of the oral cavity

Retromolar area – front view

The acupuncture channel projections of the rear part of the oral cavity

oral acupuncture points

- The pressure-sensitive points are located very densely in the RM area
- You can release blockades by treating these areas and points by injections or neural therapy
- The applied injection is a 0.5% adrenaline-free Procaine or Lidocaine solution
- You generally cannot find more than 1 – 2 sensitive points
- As a supplementary therapy this procedure increases the effectiveness of the acupuncture treatment

Injection treatment

Thank you for your attention
